*... protection in practice*

**Safe-Point SP100 Needle Safety Device**

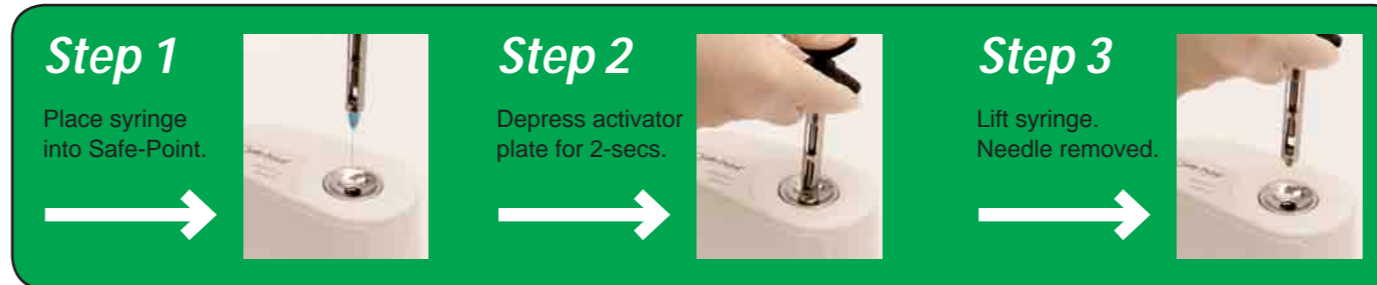

# Safe-Point®

The potential risk of needle-stick injury is of constant concern to all members of the practice team. The anxiety and trauma associated with a member of staff experiencing a needle-stick injury can have serious effects on both staff and patients.

## Transmission rates after a needle-stick injury

**HIV - 1 in 300    Hepatitis C - 1 in 3**

Safe-Point automatically unscrews and disposes of a used needle in seconds providing a responsible and effective solution to the safe disposal of used needles.

## “Promote best practice - reduce needle-stick injuries - use Safe-Point”

- Safe:** User never needs to handle a used needle.
- Versatile:** Removes ALL popular makes of dental needles.
- Fast:** Needle removed and disposed of in just 2 seconds.
- Compliant:** Safe-Point complies fully with Trust policy.
- Efficient:** Replacable 250 needle capacity sharps container.

## “In 2006, four UK health workers died as a result of needle-stick injury”

Safe-Point in any surgery dramatically reduces the potential risk of cross infection from blood-borne viruses such as Hepatitis and HIV. With 1 in 100 people in the UK carrying a serious blood-borne viral infection<sup>3</sup>... **Why risk it?**

Using Safe-Point ensures the practitioner complies with Trust needle-stick policy in the following ways:

- ✓ A safety device is used to reduce the risk of injury.
- ✓ The needle is removed at the point of treatment.
- ✓ Sharps are segregated from the pharmaceutical waste.
- ✓ Minimum handling of used needles is ensured.
- ✓ Needles are never re-sheathed.
- ✓ The dentist removes the needle, not the nurse.

**NEVER RE-SHEATH**
